Viewing OneSearch results (basic Destiny interface)

Search the catalog as you normally would, choosing a keyword search. (Just type your search word(s) and then click on Enter if Keyword is the search in the left-most position, which is the default.)

**Popups must be enabled in your browser.**

OneSearch results appear on a separate tab after your search:

Additional databases that were not pre-selected for each search are available in the Catalog using the Power search function.

Select the article you want to view. If it does not pop up, close any popup windows and try it once again.
Destiny will display all of the online resources chosen by your librarian, and let you search one or more of them.
Having problems seeing the article that you chose? Try changing browser settings for Pop-up windows:
